

# CloudHMI Cloud Human Machine Interface

**CHMI** SERIES

# CloudHMI

Breaking through the traditional architecture of HMI, we introduce an innovative HMI architecture, CloudHMI. The CloudHMI splits the traditional HMI architecture into the server device and the display device. The server device, cMT-SVR connects with a PLC and proceeds protocol conversion, data logging, event logging, recipe, database maintenance, macro commands execution, etc. The visualization function is perfectly integrated into cMT-iV5 or Tablet PC with the powerful CloudHMI software.

Not only do we inherit the advantages of traditional HMI and the motto of **"Make Things Easy,"** we also lead the trend of infinite innovation in HMI technology - **Lead HMI to the Cloud.**

## ▶ Two easy steps to startup CloudHMI with cMT-iV5

1

Edit a project with **EasyBuilder Pro** on PC and download the project to the **cMT-SVR** via Ethernet.

2

Upload the project from the cMT-SVR to the **cMT-iV5** via **Ethernet**.

## ▶ Three easy steps to startup CloudHMI with Tablet PC

1

Edit a project with **EasyBuilder Pro** on PC and download the project to the **cMT-SVR** via Ethernet.

2

Download **CloudHMI APP** to your Tablet PC.

3

Upload the project from the cMT-SVR to the Tablet PC via **Wi-Fi**.

## ► Traditional HMI Architecture

Each machine is equipped with one HMI.  
If any of the HMIs stops working, the machine will be out of service.

## ► CloudHMI Architecture

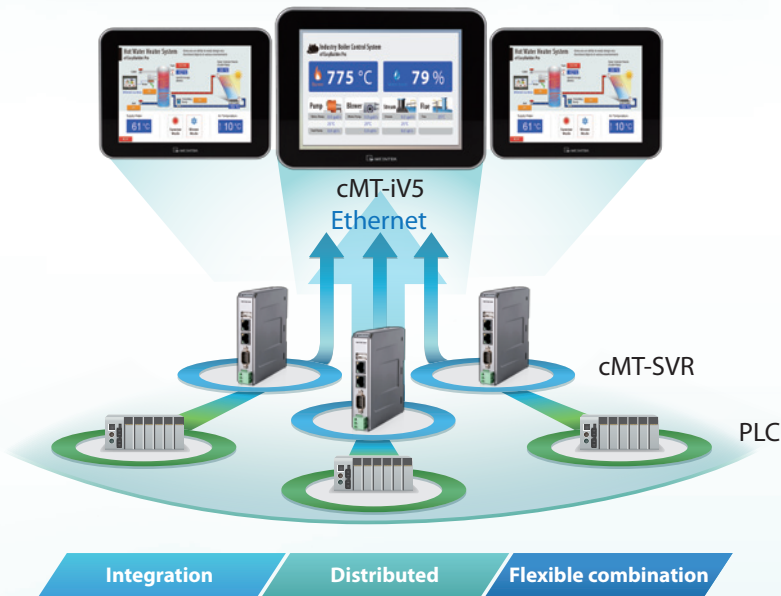

Each machine is equipped with one cMT-SVR which can be monitored and controlled by several touch panels such as cMT-iV5s or Tablet PCs. If one of the cMT-iV5s / Tablet PCs is out of service, the other touch panel can take over the operation of cMT-SVR instantly.  
This way greatly improves the reliability of CloudHMI.

# cMT-iV5

## ► Breakthrough the traditional architecture of one machine terminal with one touch panel

The connection between cMT-SVR and cMT-iV5 via 1G Ethernet constructs a powerful multiprocessing architecture of HMI. The cMT-SVR can flexibly combine with cMT-iV5 and iPad to enhance its operational efficiency.

## ► The monitoring center of HMIs

Integrated with all cMT-SVRs based on the distributed architecture, the cMT-iV5 can monitor all the operational status of machines at the same time.

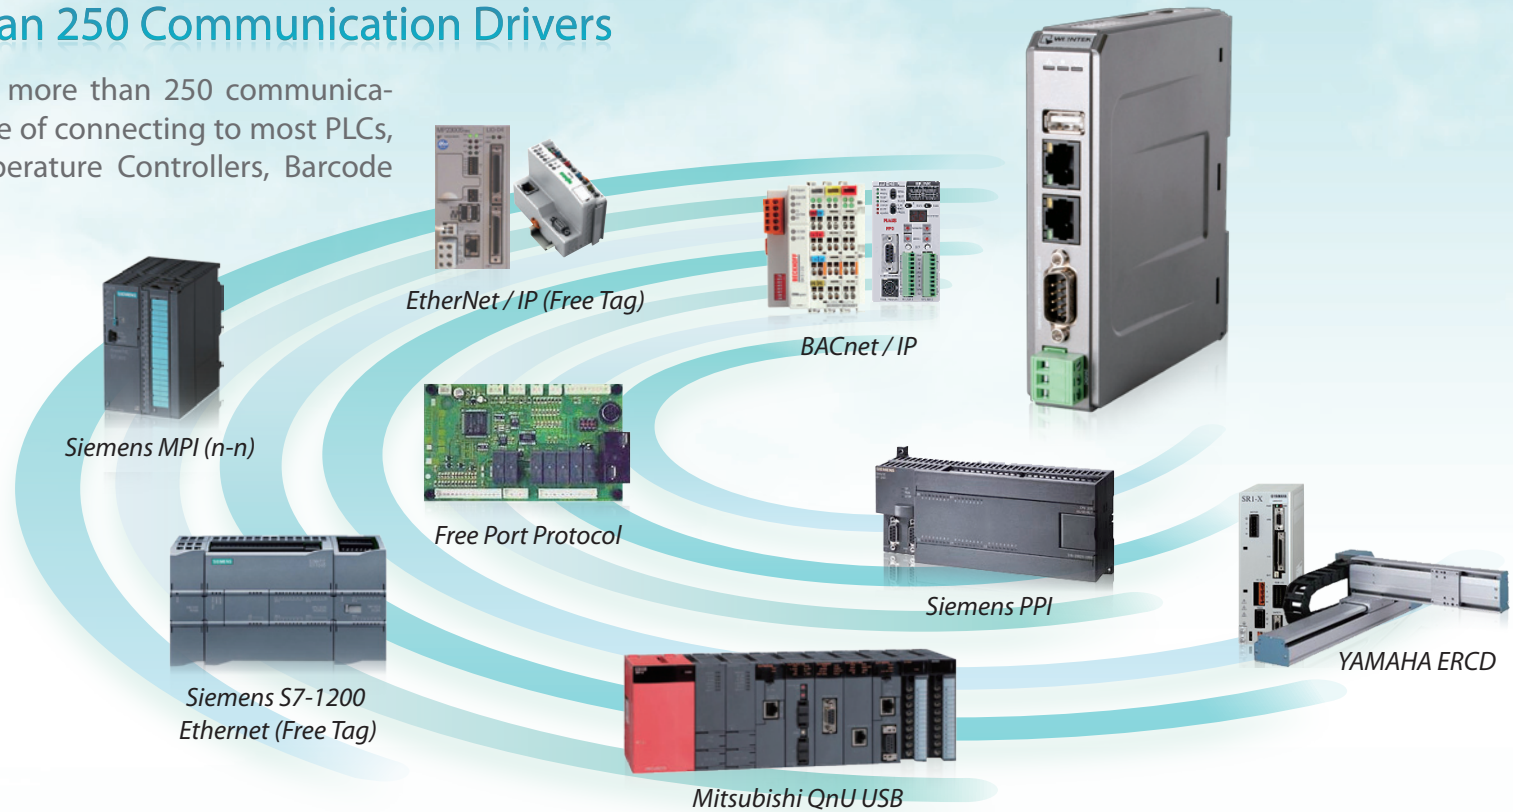

## ► Perfect integration of hardware and software brings the ultra-high performance of cMT-iV5

With 9.7" high resolution 1024x768 LCD and Cortex A9 1GHz Dual-Core processor, cMT-iV5 boasts excellent graphics performance and perfectly monitors the operational status of machines.

## ► Support more than 250 Communication Drivers

The cMT-SVR supports more than 250 communication drivers. It is capable of connecting to most PLCs, Servos, Inverters, Temperature Controllers, Barcode Scanners, etc.

## ► Unprecedented operating experience

The cMT-iV5 is equipped with a projective capacitive touch panel. The cover of projective touch panel is a tempered glass with 7H hardness and it is resisted to scratch. The cMT-iV5 provides the Multi-touch functionality with high positioning accuracy. This feature makes you operate cMT-iV5 extremely intuitively and easily just like using an iPad.
